TEMPERATURE MAPPING- LogTags:

Logtag SA can offer a complete solution for temperature mapping of Warehouses/ Coldrooms / Medical stores and transportation, on site or remotely.

We are extremely cost effective due to our inherent expertise and on- hand logger availability.

Scope of work:

Mapping Rationale/ Protocol, Logger placement, Data Analysis, Comprehensive Mapping report and continuous monitoring recommendations, will be supplied.

Logtag SA would rent you "X" amount of TRIX-8 Logtags [WHO pqs E006/006] to map your warehouse/ cold store areas. (Calculated on the m² of areas X 3 levels)

Method, in brief:

- You would complete the mapping questionnaire.
- We formulate the placement rationale/ study protocol for signature and instruct you as such.
- We will place the Loggers or instruct you accordingly
[This may be a once off placement or staggered through areas, depending on the quantity of Loggers required]
- Recorded data will be downloaded (Using the Logtag interface cradle and free software) – All data saves automatically on your computer.
- We will analyse all the data, multi chart, identify "hot" spots and recommend continuous monitoring positioning of Loggers.
- Return the rented Logtags and purchase the recommended amount for continuous monitoring. (These permanent placements will be advised in the report)
- We will draft and present you with the validation mapping report, in line with your compliance requirements.

This Temperature Mapping exercise is complete and we can repeat the exercise annually, as required.

I trust this is explanatory and please revert with your comments for more discussion in detail.

Thanking you in advance and looking forward to being of service.

Yours,

Matthew Meldau
